

Controlling Hazards

1. Many of the hazards in our work area have already been identified and controlled. What are some examples in our work area?
2. Why is it important for us to look for hazards if they have already been identified and controlled?
3. What should you do if you don't know how a hazard is controlled or you don't know how to use the control?
4. What is the best way to control a hazard?

Eliminate it.

5. Why are administrative controls, like training and warning signs, less effective than eliminating or substituting the hazard, or using engineered controls?

Because administrative controls require the human to utilize the information and people sometimes make mistakes.
