

# Safety Brief Talking Points

## Doing these things Always

1. Why is it important for us to Always Identify and Control Hazards, even for processes that we have done for a long time?

2. Why is this especially true when we are doing something new or that we don't do very often?

*Because all of the hazards may not have been identified and controlled*

3. Is it okay to skip identifying and controlling hazards if the order is extremely hot?

4. How does Yaskawa define Safety?

*Identify the Hazards*

*Control the Hazards*

*Do these things Always*
